Silver-Level Plan Premium and Cost-Sharing Reduction Breakdown

Fact Sheet November 2017

In an effort to make access to healthcare insurance more affordable, the Affordable Care Act used two cost reduction methods: tax credits and cost-sharing reductions. Tax credits are available to individuals on a sliding scale from 100 percent of the federal poverty level (FPL) to 400 percent of the FPL and are used to offset the cost of a health insurance premium. In addition to tax credits, cost-sharing reductions (CSRs) are available to individuals on a sliding scale from 100 percent of the FPL to 250 percent of the FPL. CSRs limit exposure to deductibles, co-payments, and coinsurance when individuals access services covered by the health insurance plan. CSRs are available only if an individual selects a silver plan (70-percent actuarial value, or A/V) through the Health Insurance Marketplace. The graphics below illustrate the level of CSR protection for individuals with incomes between 100 and 250 percent of the FPL. Despite the president's recent decision to halt reimbursement to insurers for offering CSRs, these protections for consumers are still available because insurers are required to provide them. Insurers, including those in Arkansas, have responded with increased premiums for 2018 to offset the cost.

Silver-Level Plan Premium and Cost-Sharing Reduction Breakdown

Silver-Level Plan Premium and Cost-Snaring Reduction Breakdown						
Individuals between 100 to 150% FPL (94% A/V)			Individuals between 150 to 200% FPL (87% A/V)		Individuals between 200 to 250% FPL (73% A/V)	
6%	Cost exposure	400/	0 1			
24%	Cost-sharing reduction	13%	Cost exposure	27%	Cost exposure	
		17%	Cost-sharing reduction			
				3%	Cost-sharing reduction	
70%	Premium	70%	Premium	70%	Premium

Definitions

- Actuarial value (A/V): the share of healthcare expenses covered by a health insurance plan for a typical group of enrollees
 - *Example*: For a silver-level plan that has an A/V of 70 percent, the health insurance plan covers 70 percent of expected healthcare expenses and the remaining 30 percent is covered by the enrollee through deductibles, copays, and coinsurance.
- Cost exposure: deductibles, copayments, and coinsurance
- Cost-sharing reduction (CSR): payments to insurers to reduce out-of-pocket costs for beneficiaries
- **Medical-loss ratio (MLR):** requires carriers to give insurance purchasers a rebate if less than 80 percent of premiums are spent on medical care only and more than 20 percent on administration
- **Premium:** amount paid for the insurance plan
