Executive Summary

In the United States, more than one-third of children and adolescents are overweight or obese.¹ These youth are more likely to be at risk for a variety of health problems, such as cardiovascular disease, type 2 diabetes, and bone and joint problems. Overweight or obese children who have associated chronic conditions have annual outpatient visit and prescription drug expenditures up to 32.2 percent and 35.0 percent higher, respectively, than children who are at a healthy weight.² Nationally, it is estimated that obesity-related health care costs the health system nearly \$150 billion per year.^{3,4}

Passed by the Arkansas 84th General Assembly, Act 1220 of 2003⁵ spearheaded initiatives to address obesity among public school-age children in Arkansas. This landmark legislation called for the creation of the Child Health Advisory Committee (CHAC) to make recommendations to the State Board of Education and the State Board of Health related to nutrition and physical activity in schools. The Act also required improved access to healthier foods and beverages in public schools, the creation of local committees to promote physical activity and nutrition, and confidential biennial reporting of each student's body mass index (BMI) to his or her parents.

The following report details the results of statewide student BMI data collection, including weight classifications and BMI assessment participation rates for the past four years. The results from the 2016-2017 school year show that more than one in five (22.0%) of all public school-aged children are classified as obese. For students in grade 10, nearly one in four (25.4%) are obese, which is the highest rate recorded for this grade since data collection began.

Introduction

Act 1220 of 2003⁵ established the first state-level legislation in the country to address the alarming rate of childhood obesity. The Act is aimed at making changes within public schools and school districts to encourage healthier lifestyles for students, school staff, and their families.⁶

Legislation that was subsequently passed has altered the requirements of Act 1220. In 2007, Act 201⁷ altered the BMI screening requirements. Originally, legislation mandated that all Arkansas public school students be assessed on an annual basis. Under the new requirements, only children in kindergarten and even-numbered grades 2 through 10 are assessed yearly. Furthermore, parents are offered the option to choose that their child not be screened.

This report focuses on the body mass index (BMI) assessments for all Arkansas public school students, as mandated by Act 1220 and amended by Act 201.

Additional legislation was passed that changed requirements for physical activity and physical education. During the Arkansas 2015 regular legislative session, physical education requirements for public school students in kindergarten through grade 8 were changed again. Act 1079 of 2015 reduced the weekly physical education requirement from 60 minutes to 40 minutes.⁸

Currently, 24 states^a have passed legislation that requires some form of height and weight health assessment and reporting for public school students.⁹ Of the states with general physical activity requirements, Arkansas has one of the lowest minimum requirements for physical activity in the nation.¹⁰

BMI Data Collection

The aggregate child BMI assessments presented in this report are an indication of the extent of the problem of childhood and adolescent obesity in Arkansas public schools, school districts, and the state.

Process

To complete the BMI assessments, trained school personnel or student health professionals obtain one weight and two height measurements for each student. The measurement process is conducted privately with the student facing away from the scale. Data are entered into a secure, web-based computer system that is used to generate individual, confidential Child Health Reports for parents or guardians. All public school

students in grades K, 2, 4, 6, 8, and 10 are measured, with a few exceptions (see section titled “Reasons Students’ BMI Could Not Be Assessed” for more information).

Definition of BMI

BMI is a measured value used to categorize an individual as underweight, normal or healthy weight, overweight, or obese. It is used as a standard indicator of obesity status based on an individual’s weight-to-height ratio and more accurately measures obesity status than weight alone. Using the student’s weight and height measurements, BMI is calculated using the following formula:

$$\text{BMI} = \frac{\text{Weight in pounds}}{(\text{Height in inches})^2} \times 703$$

Boys and girls grow and develop at different rates. Based upon the Centers for Disease Control and Prevention (CDC) recommendations, BMI percentiles for students are calculated individually for each boy and girl based upon his or her gender, age, height, and weight.¹¹ Following standard classifications used by healthcare professionals, BMI percentiles are then used to categorize children according to whether they are obese, overweight, healthy weight, or underweight. A higher BMI percentile indicates a greater risk for having or developing obesity-related health problems.

Obese: BMI-for-age greater than or equal to 95th percentile.

Overweight: BMI-for-age greater than or equal to the 85th and less than the 95th percentile.

Healthy Weight: BMI-for-age greater than or equal to the 5th and less than the 85th percentile.

Underweight: BMI-for-age less than the 5th percentile.

Overview of BMI Reports

Child Health Reports

Confidential Child Health Reports are made available to parents or guardians regardless of the student's BMI classification. Each report describes the reasons for Arkansas assessing student BMIs, details the BMI screening process, educates parents about obesity-related health risks, and provides simple suggestions to help families improve nutrition and increase physical activity.

There are five types of Child Health Reports, one for each of the four BMI classifications—obese, overweight, healthy weight, and underweight—and one for those students who could not be assessed (see section, “Reasons Students’ BMI Could Not Be Assessed”). If the student was assessed, the report includes student height, weight, BMI value, and BMI classification. These reports are translated into Spanish for those students whose records indicate that Spanish is the primary language spoken at home. Sample Child Health Reports are available on the Arkansas Center for Health Improvement (ACHI) website at www.achi.net.

School Reports

BMI profile reports for each school are available to designated school staff through a secure online entry system once BMI data entry has been completed. The reports, which are available on the ACHI website (www.achi.net), describe the distribution of BMI status among students in each school. BMI classifications for schools are presented separately for male and female students by grade and collectively for all students. BMI classification results for individual public schools in Arkansas are provided in Appendix A of this report. Please note that in order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students classified as overweight or obese, these two groups are combined.

School District Reports

School district reports combine information from all available school data in that district. Summary statistics for each school within the district and overall results for the district provide a community assessment of the environmental impact of obesity on public school students. School district reports are also available at www.achi.net. Results for BMI classifications of students in individual Arkansas school districts are presented in Appendix B of this report.

Student and School Participation in the BMI Data Collection

In the 2016-2017 school year, 98.2 percent of Arkansas public schools (1,029 out of 1,048), in 255 of 262 school districts, contributed valid measurements to the statewide BMI assessment. Participation rates were similar to those in previous years. Fluctuations in the total number of public schools and school districts each year are due to school and district closings, openings, and consolidations.

Only schools with students in even-numbered grades were included in this report. The totals include BMI assessments that were submitted by June 30, 2017, for 97.9 percent of public school students enrolled in grades K, 2, 4, 6, 8, and 10 (216,175 out of 220,598). Among students for whom data was reported, 83.1 percent (179,713 students) had valid data to allow BMI calculation (see section, “Reasons Students’ BMI Could Not Be Assessed”).

Student participation rates varied from 14 percent to 100 percent of student enrollment in required grades. High participation rates allow for confidence in the results reported by schools and school districts. For those schools or school districts with low participation rates, under-reporting of select categories is possible. Results are reported for 255 of 262 Arkansas school districts.

Reasons Students’ BMI Could Not Be Assessed

To complete the BMI assessments, schools collected each student’s height and weight measurements. Approximately one in six students (36,423 out of 216,175) was classified as “unable to assess” because the student did not have valid data for height, weight, or both. Table 1 provides a breakdown of reasons for the classification of “unable to assess.” Less than one-tenth of a percent (39 students) of data submitted was invalid for analysis due to incomplete or incorrect data provided, measurement protocols not being followed, or inaccurate equipment used to complete the assessment.

Figure 1. Year 14 Student BMI Assessment

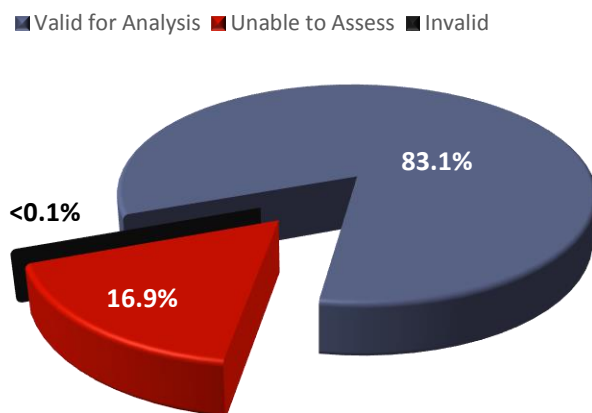

Table 1. Reasons Unable to Assess BMI

Breakdown of Reasons Unable to Assess	
Absent	14,371 (6.6%)
Parent Declined	11,742 (5.4%)
Student Declined	3,356 (1.6%)
Inaccurate Enrollment Information	3,703 (1.7%)
Other	2,551 (1.2%)
Physical Disability	586 (0.3%)
Pregnant	38 (<0.1%)
Weight Exceeded Scale	47 (<0.1%)
Inaccurate Measurements	29 (<0.1%)

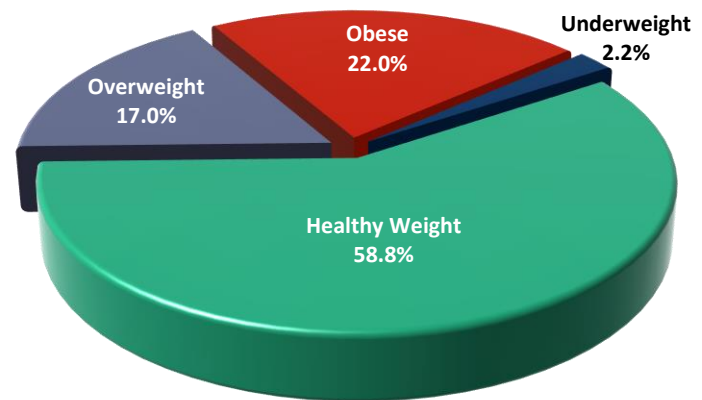

Statewide Results of the Arkansas BMI Assessment

Total public school enrollment in grades K, 2, 4, 6, 8, and 10 for the 2016-2017 school year, reported by the Arkansas Department of Education, was 220,598 students enrolled in 1,048 schools within 262 school districts. The results presented in this section are based on data from 179,713 individual students (enrolled in grades K, 2, 4, 6, 8, or 10) with valid BMI assessments reported prior to June 30, 2017, by 1,029 schools in 255 school districts. BMI classifications are reported by gender, race/ethnicity, and grade. This section includes statewide percentages of underweight, healthy weight, overweight, and obese students for selected demographic subgroups. Percentages for these four classifications are also reported for the majority of districts and counties in the state (see Appendices B and C).

BMI Classifications for All Students

Figure 2 illustrates the BMI classification distribution of Arkansas students during the 2016-2017 school year. In Year 14 (2016-2017), 39.0 percent of Arkansas students were classified as overweight or obese.

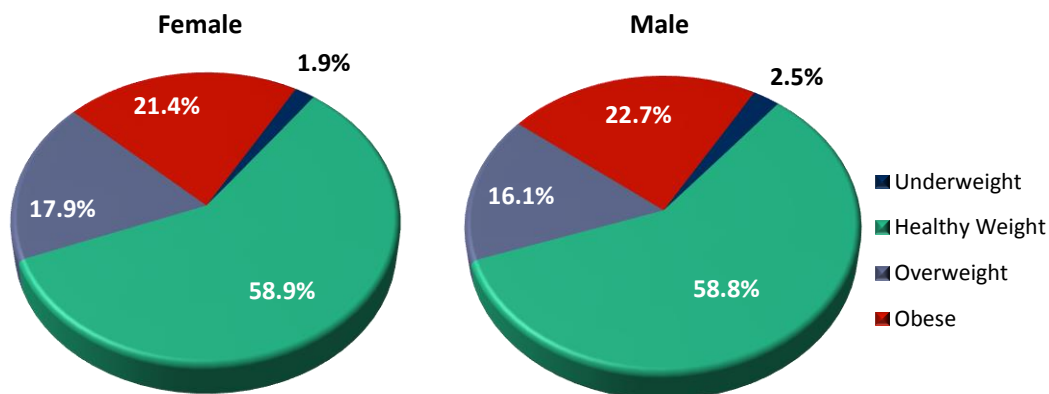

Figure 2. Year 14 Student BMI Classification for Arkansas Public School Students

BMI Classifications by Gender

Figure 3 provides BMI classifications by gender for the 2016-2017 school year. Slightly more boys (22.7 percent) than girls (21.4 percent) were classified as obese. In the overweight category, a higher percentage of girls (17.9 percent) were classified than boys (16.1 percent). The percentage of healthy weight students was similar for girls and boys (58.9 percent and 58.8 percent, respectively).

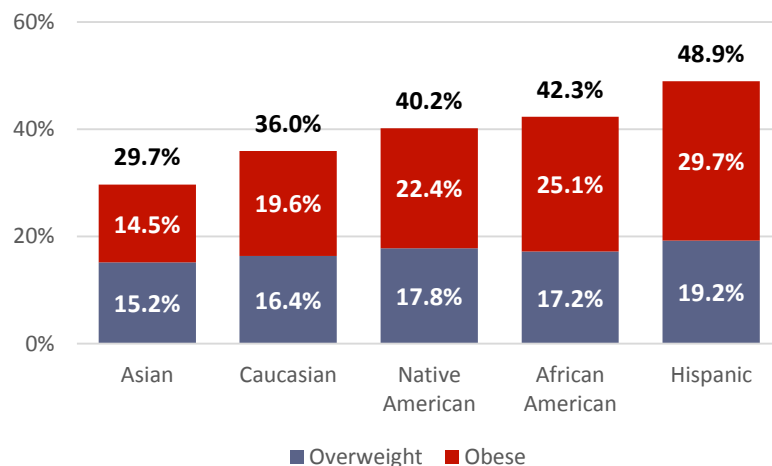

Figure 3. Year 14 Student BMI Classification by Gender

BMI Classifications by Race/Ethnicity

Figure 4 shows the percentage of students classified as overweight or obese, grouped by race/ethnicity group. As in prior years, Hispanic students had the highest rates of overweight and obese classifications at 48.9 percent, combined. Among African American students, 42.3 percent were either overweight or obese, followed by 40.2 percent of Native American students, 36.0 percent of Caucasian students, and 29.7 percent of Asian students.

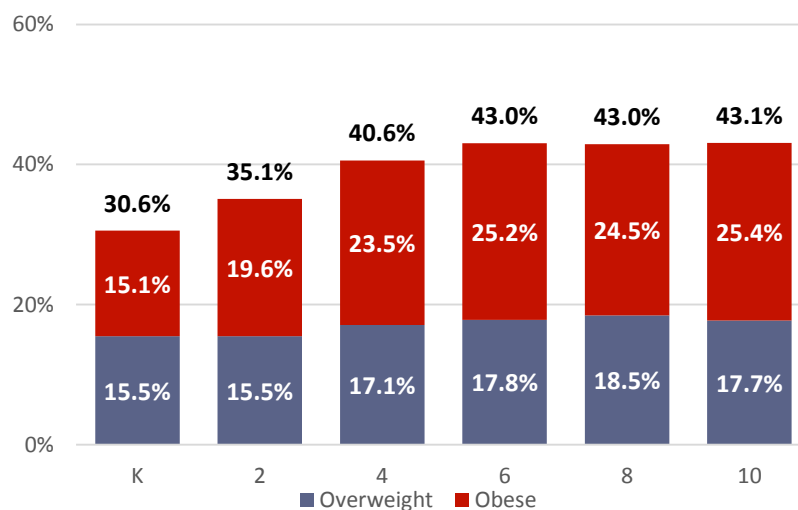

Figure 4. Year 14 Percentage of Students Overweight & Obese by Race/Ethnicity

BMI Classifications by Grade

Figure 5 illustrates the percentage of students who were overweight or obese by grade level. Findings indicate that 30.6 percent of kindergarten students entered the school system either overweight or obese. The percentage of students who are either overweight or obese increases until grade 6, where it levels off at approximately 43 percent of students through the tenth grade.

Figure 5. Year 14 Percentage of Students Overweight & Obese by Grade

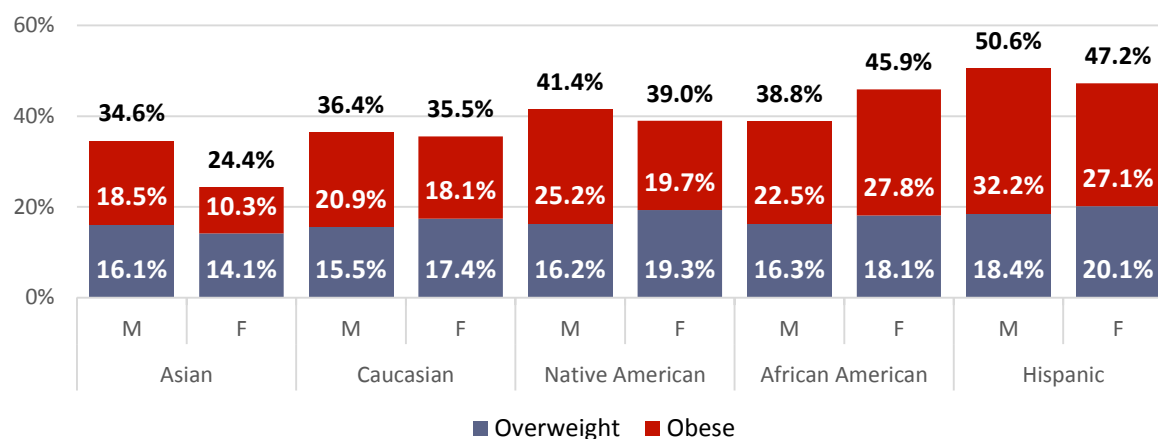

BMI Classifications by Race/Ethnicity and Gender

When evaluating results by race/ethnicity group and gender, Hispanic boys showed the highest percentage of overweight or obese students, with more than half (50.6 percent) of Hispanic boys classified as overweight or obese (see Figure 6). Asian, Native American, and Caucasian boys also had higher rates (34.6 percent, 41.4 percent, and 36.4 percent, respectively) compared with girls in the same groups. African Americans were the only group with a lower percentage of boys (38.8 percent) that were overweight or obese when compared with girls (45.9 percent). Among girls, the highest percentage of overweight or obese students was found in Hispanics at 47.2 percent, followed by African Americans at

45.9 percent. Native American girls had a combined overweight and obesity rate of 39.0 percent, while 35.5 percent of Caucasian girls and 24.4 percent of Asian girls were classified as overweight or obese.

The greatest difference between male students and female students within a race/ethnicity group was among Asian students, where 24.4 percent of girls were in the two highest BMI categories compared with 34.6 percent of boys.

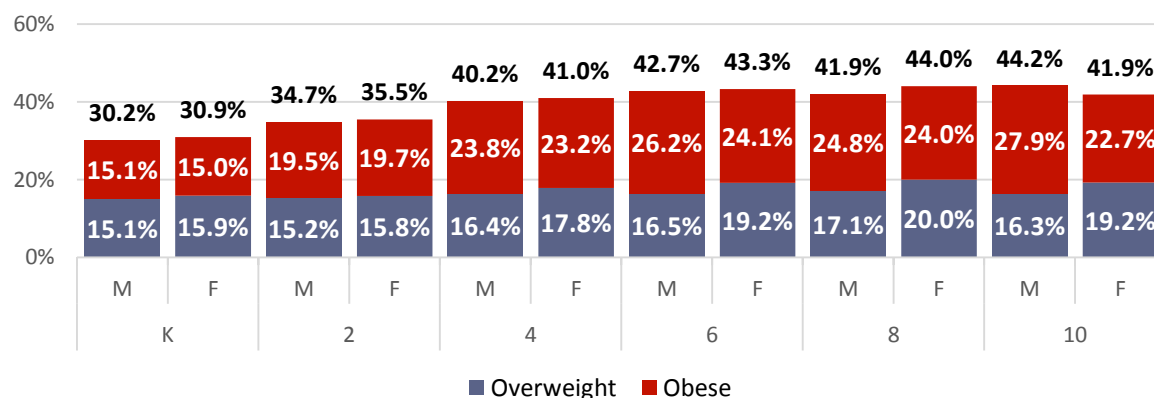

Figure 6. Year 14 Percentage of Students Overweight & Obese by Race/Ethnicity & Gender

BMI Classifications by Grade and Gender

As illustrated in Figure 7, data show that about the same percentage of boys (30.2 percent) and girls (30.9 percent) enter school either overweight or obese in kindergarten. In the second grade, the trend continues, as a slightly greater percentage of female students (35.5 percent) than male students (34.7 percent) were classified in the overweight or obese categories. Of overweight and obese students in the fourth grade, there was a slightly greater percent of girls (41.6 percent) than boys (39.6 percent). In the sixth grade, boys and girls were about equal (42.7 percent and 43.3 percent, respectively) for the overweight or obese categories. In the eighth grade, the difference was more pronounced than in most other grades, with 41.9 percent of boys and 44.0 percent of girls in the two highest BMI categories. This pattern changed in the tenth grade with the largest difference between genders, this time with the rate greater for boys (44.2 percent) than girls (41.9 percent) in the overweight or obese categories.

Figure 7. Year 14 Percentage of Students Overweight & Obese by Grade & Gender

BMI Classifications by Gender, Race/Ethnicity Group, and Grade

Analysis of the BMI data shows that some groups of students face a heightened risk for childhood obesity. The highest obesity rates were found among Hispanic boys, especially in the sixth grade, where 58.2 percent were classified as overweight or obese (see Figure 8 and Table 2).

Figure 8. Year 14 Percentage of Students Overweight & Obese by Gender, Race/Ethnicity & Grade

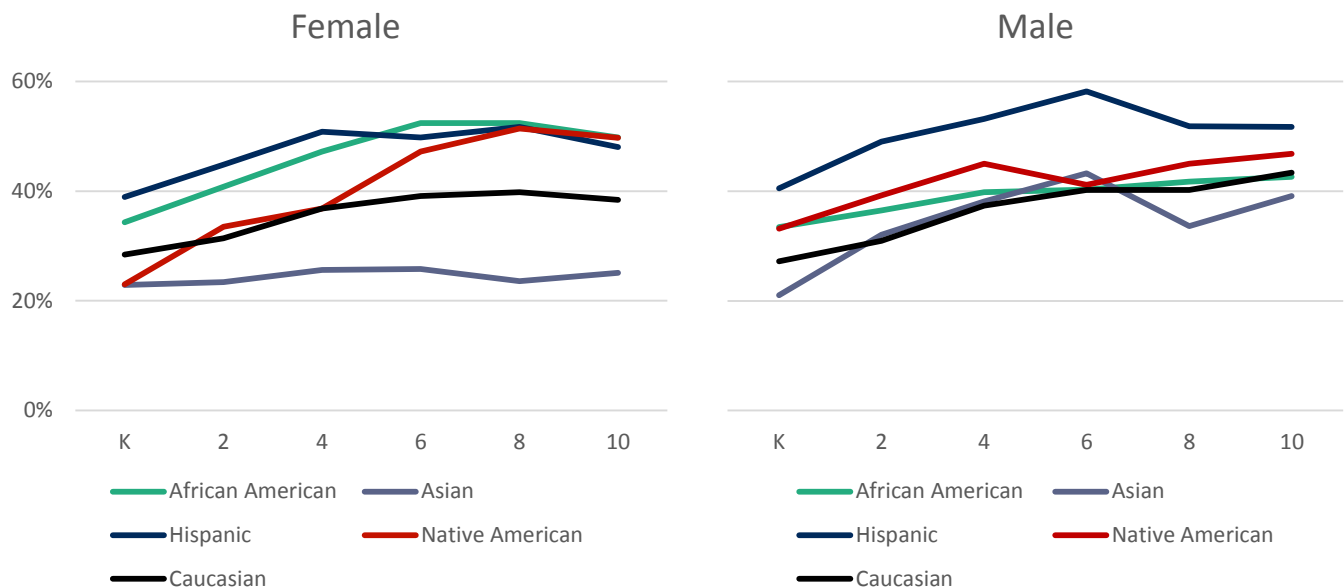

Table 2. Year 14 Percentage of Students Overweight & Obese by Gender, Race/Ethnicity & Grade

	Female					Male				
	African American	Asian	Hispanic	Native American	Caucasian	African American	Asian	Hispanic	Native American	Caucasian
K	34.3%	22.9%	38.9%	23.0%	28.4%	33.5%	21.0%	40.5%	33.2%	27.2%
2	40.8%	23.4%	44.8%	33.5%	31.4%	36.5%	32.1%	49.0%	39.2%	31.0%
4	47.2%	25.6%	50.8%	36.8%	36.8%	39.8%	38.1%	53.2%	45.0%	37.4%
6	52.4%	25.8%	49.8%	47.2%	39.1%	40.3%	43.6%	58.2%	41.2%	40.2%
8	52.4%	23.6%	51.7%	51.4%	39.8%	41.8%	33.6%	51.9%	45.0%	40.3%
10	49.8%	25.1%	48.0%	49.7%	38.4%	42.6%	39.1%	51.7%	46.8%	43.4%

Trends in Student BMI

Data from five years of BMI screenings (see Figure 9) reveal that the distribution of students in each of the four categories (underweight, healthy weight, overweight, and obese) has remained steady.

Figure 9. Trends in BMI Classifications for Arkansas Public School Students

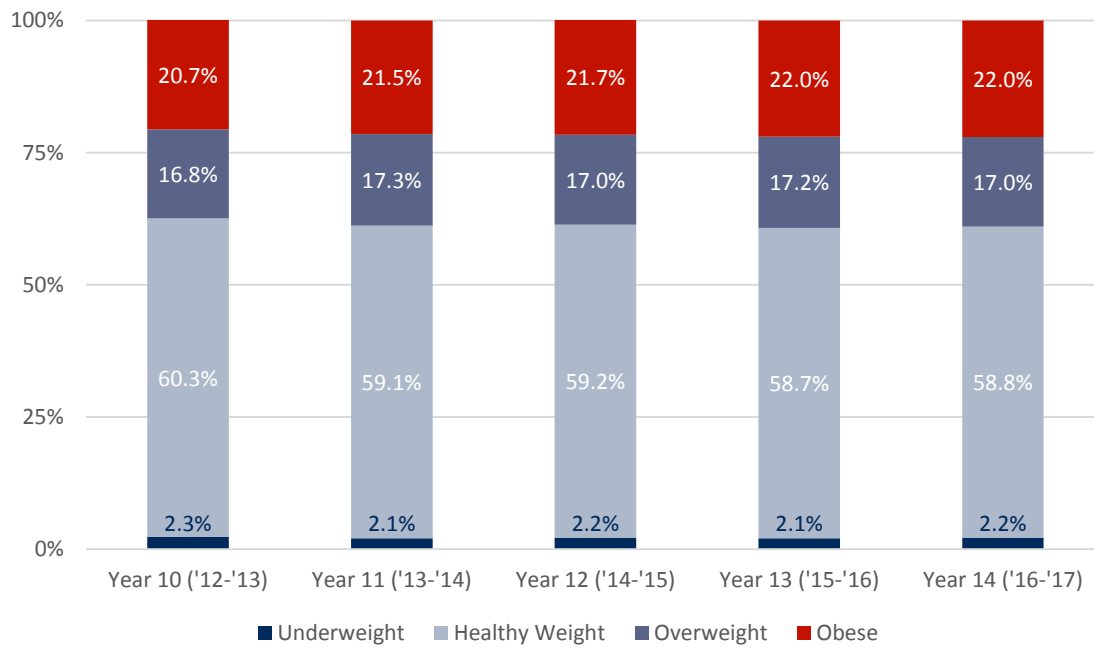

Figure 10 illustrates the trend of overweight and obese students in kindergarten and in the tenth grade over the 14 years data has been collected. There has been modest improvement in the percentage of overweight and obese students entering kindergarten from Year 1 (32.6 percent) to Year 14 (31.6 percent). However, the trend in the percentage of students who are overweight and obese in grade 10 is at a 14-year high of 43.3 percent, up 4.7 percentage points from the initial grade 10 assessment of 38.6 percent in Year 1.

Figure 10. Percent of Students Overweight & Obese by Grade, Year 1 to Year 14

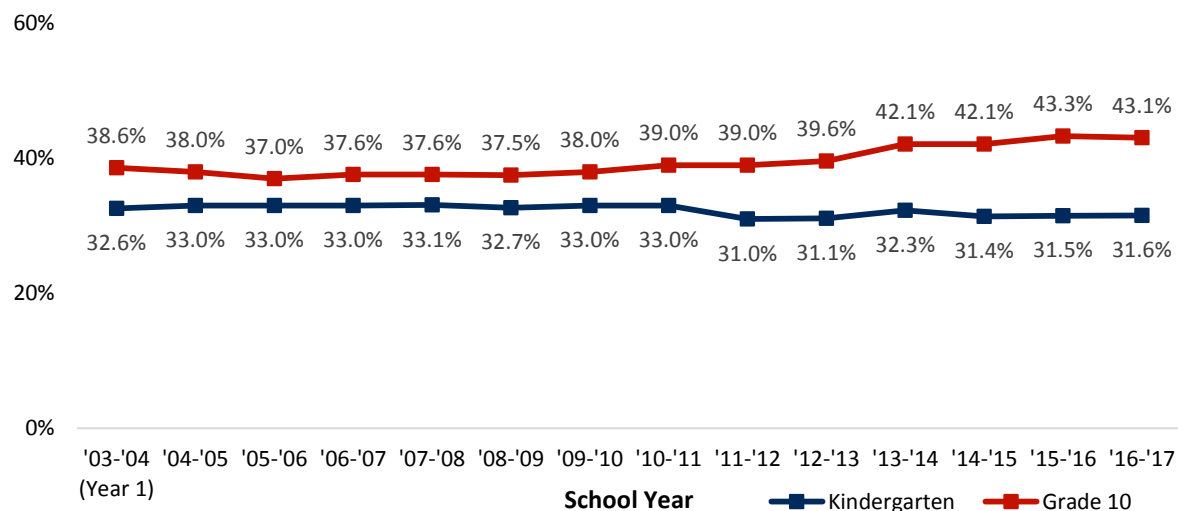

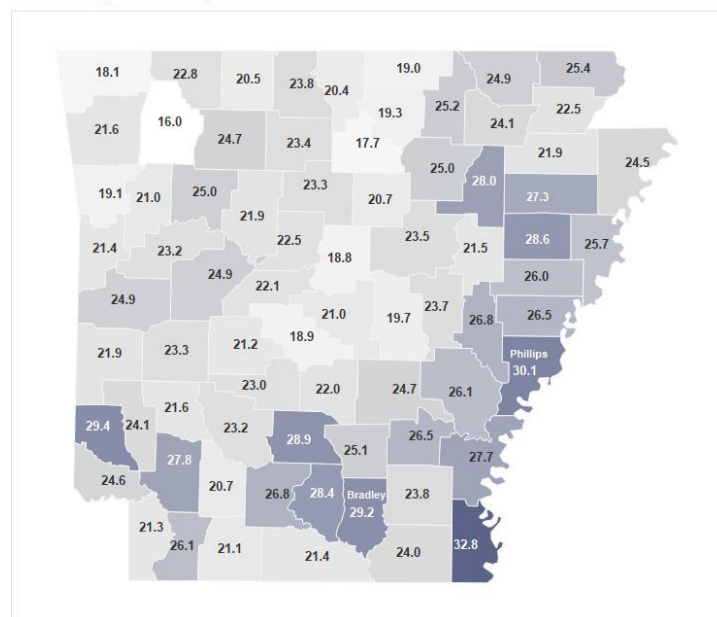

Figure 11 shows an association between childhood obesity and life expectancy¹² for counties in Arkansas. Counties with darker shades indicate higher rates of obesity and lower life expectancy. Two counties, Phillips and Bradley, are notable for being in the top 5 counties for both child obesity rate and low life expectancy. Among public school children in Phillips County, 30.1 percent are categorized as obese, and life expectancy is 71.5 years. Bradley has 29.2 percent of public school children categorized as obese and a life expectancy of 72.8 years.

Obese (Percent)

[illegible]

The fact that more than 39 percent of Arkansas public school students are classified as overweight and obese (21.9 percent obese alone) highlights the need for continued efforts that address child health and wellness. In October 2015, Governor Asa Hutchinson launched Healthy Active Arkansas.^b With partners from the public and private sectors and a statewide network of local champions, this initiative is a framework of nine priority areas to increase the percentage of Arkansans at a healthy weight. The priority areas are: physical and built environment; nutritional standards in government, institutions, and the private sector; nutritional standards in schools—early childhood through college; physical education and activity in schools—early childhood through college; healthy worksites; access to healthy foods; sugar-sweetened beverage reduction; breastfeeding; and a marketing program. Each area has two, five, and 10-year strategies, with related action steps and partners to help in implementing the plan.

Appendix A: BMI Classification by School

Note: In order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools/districts with less than five students classified as overweight or obese, these two groups are combined.

Appendix B: BMI Classification by School District

Note: In order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools/districts with less than five students classified as overweight or obese, these two groups are combined.

School District	District LEA	Underweight (%)	Healthy Weight (%)	Underweight and Healthy Weight (%)	Overweight (%)	Obese (%)	Overweight and Obese (%)
ACADEMICS PLUS SCHOOL DISTRICT	6040700	2.27	64.4	66.67	17.69	15.65	33.33

Appendix C: BMI Classification by County

Note: In order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools/districts with less than five students classified as overweight or obese, these two groups are combined.

County	Underweight (%)	Healthy Weight (%)	Overweight (%)	Obese (%)	Overweight and Obese (%)
