

ASSESSMENT OF CHILDHOOD AND ADOLESCENT OBESITY IN ARKANSAS

Year 19 (Fall 2021-Spring 2022)

December 2022

Suggested Citation

ACHI. (2022). *Assessment of Childhood and Adolescent Obesity in Arkansas: Year 19 (Fall 2021-Spring 2022)*. Arkansas Center for Health Improvement. Little Rock, AR.

Executive Summary

In the United States, more than one-third of children and adolescents are classified as overweight or obese.¹ This population is more likely to be at risk for a variety of health problems, including cardiovascular disease, type 2 diabetes, and bone and joint problems, among others. Children who are overweight or obese have associated chronic conditions and have annual outpatient visit and prescription drug expenditures up to 35% higher than children who are at a healthy weight.² Nationally, it is estimated that obesity-related health care costs the health system \$190 billion per year.³ Preliminary studies have shown increased weight among individuals during the COVID-19 pandemic, which has the potential to raise the rate of obesity both nationally and in Arkansas.

Passed by the Arkansas 84th General Assembly, Act 1220 of 2003⁴ spearheaded initiatives to address obesity among school-age children in Arkansas. Under this legislation, schools are required to collect students' height and weight measurements and include a body mass index (BMI) percentile by age for each student. This requirement begins in kindergarten and continues for even-numbered grades. The Act also required improved access to healthier foods and beverages in schools, the creation of local committees to promote physical activity and nutrition, in addition to confidential reporting of each student's BMI measurement to his or her parents or guardians biennially.

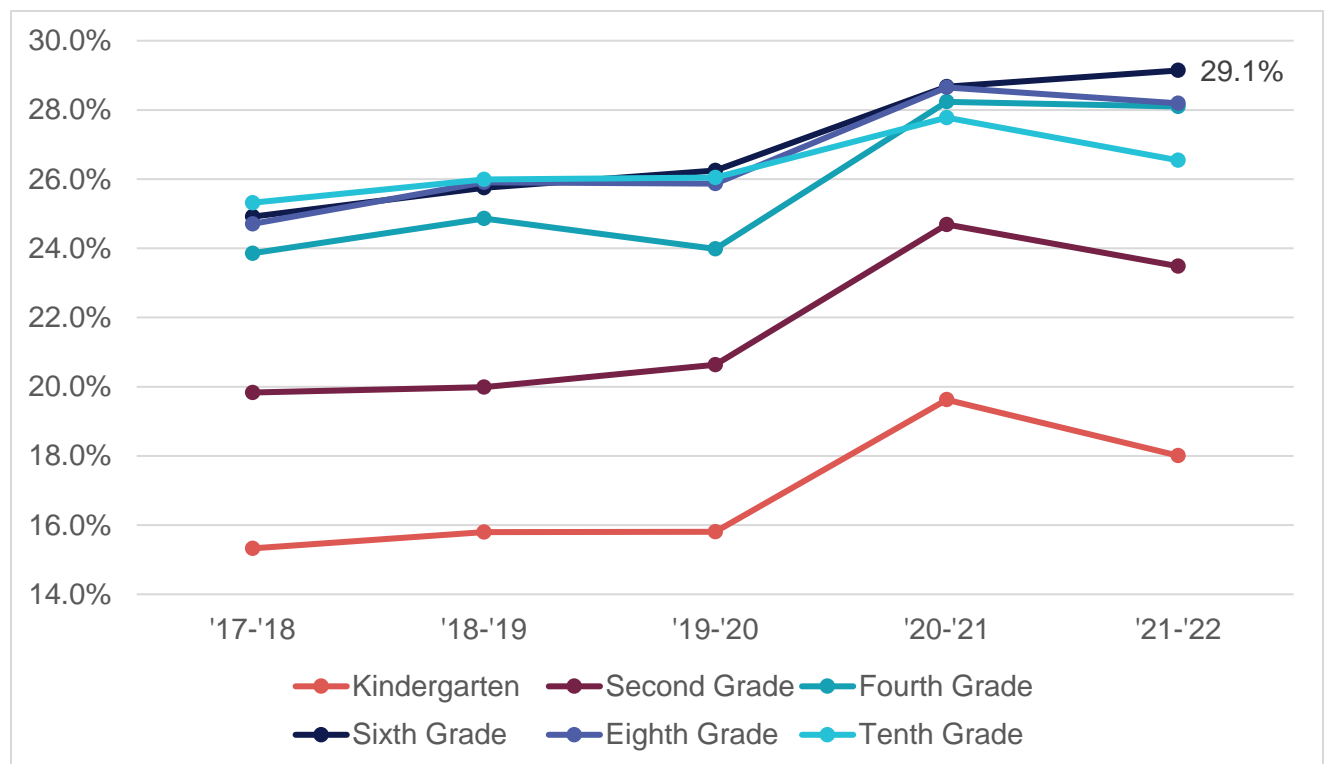

While the statewide collection of BMI data helps inform parents about their child's weight status, data and information from the program may assist in developing new policies and improving health outcomes for all Arkansans. A previous study that used data from the Arkansas BMI screening program concluded that the program has greatly improved the ability to identify children at greatest risk of future obesity, and the ability to predict which children are at an elevated risk of obesity may prove helpful in developing more-effective policies and improved health outcomes.⁵ The data is also used by schools, districts, and state agencies when applying for grants.

The following report details the results of Arkansas's statewide student BMI data collection, including weight categories and BMI assessment participation rates for the past five years. The results from the 2021-2022 school year show that more than one in four (25.5%) public school-age children had a BMI measurement classified as obese, down only slightly from 26.1% for the previous school year (2020-2021).

The past two years' findings both represent an increase from 22.9% for the 2019-2020 school year, suggesting a sustained increase in childhood obesity in Arkansas as a result of COVID-19-related impacts. This finding is similar to those of studies from other states that indicate individuals have experienced increased weight gain during the pandemic.⁶ A large cohort study, which included school-age children and adolescents, found weight gain among the study population in the most recent school year compared to previous years and found that younger children experienced greater relative weight gain than older children.⁷ Like these studies, outcomes from Arkansas student BMI measurements from the 2020-2021 school year also demonstrate increased weight gain among students during the initial wave of COVID-19 in Arkansas, particularly among elementary school aged children. For the 2021-2022 school year, these increases were generally sustained.

Figure 1 displays the percentage of children with a BMI measurement in the obese category for the past four measurement periods. From the 2019-2020 to 2020-2021 school year, each grade saw a statistically significant increase in the percentage of students with a BMI in the obese category. For the 2021-2022 school year, the proportion of students with a BMI measurement in the obese range decreased for students in Kindergarten, second, and tenth grades, slightly decreased for students in fourth and eighth grades, and increased for students in sixth grade. While some grades decreased, the proportion of students with a BMI measurement in the obese range was still higher than pre-COVID levels for every measured grade.

FIGURE 1. PERCENTAGE OF ARKANSAS PUBLIC SCHOOL STUDENTS WITH A BMI CLASSIFICATION OF OBESE, BY GRADE, 2017-2018 THROUGH 2021-2022 SCHOOL YEARS

COVID-19 Impacts and BMI Measurement Collection

BMI data collection for the 2020-2021 school year was met with challenges, as the COVID-19 pandemic continued to impact students and school staff throughout the state. Many students attended school virtually due to risk mitigation efforts and quarantining protocols. Completion of height and weight measurements and data entry was affected by these activities which led to a decrease in valid measurements of 55% of students compared to 64% in the previous year. However, for the 2021-2022 school year, valid BMI measurements were recorded for 76% of eligible students.

Because of the increase in measurements collected in the 2021-2022 school year compared to the previous school year, ACHI conducted statistical studies to test whether BMI data collected in 2021-2022 represented a cohort of students similar to that of the previous two

school years. This was necessary to ensure that trends could accurately be compared across years.

We used a categorical statistical test to compare the distribution of valid measurements in the 2021-2022 school year to the distribution of valid measurements in previous school years. The variables studied were those traditionally associated with having obesity: free and reduced-price lunch status (as a proxy for income level); race and ethnicity; rurality (using rural-urban continuum codes); and district size (defined as large or small districts based on having more than or fewer than 5,000 enrolled students). The outcomes of these comparisons indicated that there were not significant differences in distribution of these variables in the 2021-2022 cohort compared to the two previous cohorts.

Preliminary studies from other states indicate that individuals have experienced increased weight gain during the COVID-19 pandemic.⁶ A large cohort study, which included school-age children and adolescents, found weight gain among the study population in the most recent school year compared to previous years and found that younger children experienced greater relative weight gain than older children.⁷ Like these studies, outcomes from Arkansas student BMI measurements from the 2021-2022 school year also demonstrate increased weight gain among students during the initial wave of COVID-19 in Arkansas, particularly among elementary school aged children. The findings included in this report suggest an increase in pediatric obesity in Arkansas as an impact of the COVID-19 pandemic. Overall, the ongoing collection of BMI data successfully continued for the 2021-2022 school year.

Introduction

Act 1220 of 2003 established the first state-level legislation in the country to address the alarming prevalence of childhood obesity. The Act is aimed at making changes within schools and school districts to encourage healthier lifestyles for students, school staff, and their families.⁸

Act 201 of 2007⁹ amended the original BMI screening requirements of Act 1220 from assessing students in each grade to only assessing students in kindergarten and even-numbered grades 2 through 10. Parents were also offered the option to choose that their child not be screened.¹⁰

As of 2014, 24 states^a had passed legislation requiring some form of height and weight health assessment and reporting for public school students.¹¹ In 2021, Senate Bill 2741 was introduced in the United States Senate to amend the Public Health Services Act to promote healthy eating and physical activity among children.^b The bill was referred to the Senate Committee on Health, Education, Labor and Pensions in September 2021.

This report focuses solely on the BMI assessments for Arkansas public school students, as mandated by Act 1220 and amended by Act 201.

BMI Data Collection

The aggregate child BMI assessments presented in this report are an indication of the extent of the problem of childhood and adolescent obesity in Arkansas schools, school districts, and the state.

PROCESS

To complete the BMI assessments, trained school personnel or student-health professionals obtain one weight and two height measurements for each student. The measurement process is conducted privately with the student facing away from the scale. Data are entered into a secure, web-based computer system that is used to generate individual, confidential child health reports for parents or guardians. All public school students in grades K, 2, 4, 6, 8, and 10 are measured, with some exceptions (see section titled “Reasons Students’ BMI Could Not Be Assessed” for more information).

DEFINITION OF BMI

BMI is a constructed value that can be used to assign individuals into underweight, normal or healthy weight, overweight, or obese weight status categories. Using a student’s weight and height measurements, BMI is calculated using the following formula:

$$\text{BMI} = \frac{\text{Weight in pounds}}{(\text{Height in inches})^2} \times 703$$

Boys and girls grow and develop at different rates. Based on the Centers for Disease Control and Prevention (CDC) guidelines, BMI percentiles for students are calculated individually for each boy and girl based upon their gender, age, height, and weight.¹²

Following standard classifications based on expert committee recommendations and used by healthcare professionals, BMI percentiles are used to categorize children according to whether they are underweight, healthy weight, overweight, or obese. For children of similar ages and genders, a higher BMI indicates a greater risk for having or developing obesity-related health problems. These BMI-for-age weight status classifications are as follows:

Obese: BMI-for-age and gender greater than or equal to 95th percentile.

Overweight: BMI-for-age and gender greater than or equal to the 85th and less than the 95th percentile.

Healthy Weight: BMI-for-age and gender greater than or equal to the 5th and less than the 85th percentile.

Underweight: BMI-for-age and gender less than the 5th percentile.

Overview of BMI Reports

CHILD HEALTH REPORTS

Confidential child health reports are made available to parents or guardians regardless of the student's BMI classification. For the 2021-2022 school year, this report was developed in the Cognos reporting system. This report includes vision, hearing, scoliosis, and BMI screening results and provides simple suggestions to seek guidance from a doctor if necessary.

If the student was assessed, the report includes the height, weight, BMI value, and weight status based on BMI classification. The report includes an explanation of what is considered a normal BMI measurement range, and what to do if a child's BMI is above that range.

SCHOOL AND DISTRICT-LEVEL REPORTING

Summary BMI profile information is included in Appendix A of this report for individual schools and in Appendix B for individual districts. This information is also published in an online dashboard.[°] For previous reporting years, reports were available to designated school staff through a secure online entry system for each school once BMI data entry was completed. The reports, which are available on ACHI's website, describe the distribution of BMI status among students in each school or district. BMI classifications for schools are presented separately for male and female students by grade and collectively for all students by gender. School district reports combine information from all available school data in that district. Summary statistics for each school and district provide a community assessment of the environmental impact of obesity on public school students.

Please note that in order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is not reported. If fewer than five students are in the overweight or obese groups, they are combined with another group. For example, if fewer than five students are classified as overweight or obese, these two groups are combined and reported as such.

[°] <https://achi.net/body-mass-index-program>

Student and School Participation in the BMI Data Collection

In the 2021-22 school year, 98.6% (1,023 out of 1,037) of Arkansas public schools, in all 259 school districts, contributed measurements in the statewide BMI assessment. Participation rates were slightly higher than in previous years. Fluctuations in the total number of public schools each year are due to school closings, openings, and consolidations.

Only schools with students in even-numbered grades were included in this report. The totals include BMI assessments that were submitted by June 30, 2022, for 88.8% (193,833 out of 218,391) of public school students enrolled in grades K, 2, 4, 6, 8, and 10. Among students for whom data was reported, 75.6% (165,131 students) had valid data to allow BMI calculation (see section “Reasons Students’ BMI Could Not Be Assessed”).

Student participation at schools that contributed varied from 0.27% to 100% of the students enrolled in the required grades. High participation allows for confidence in the results reported by schools and school districts. For those schools or school districts with low participation, under-reporting of certain categories is possible.

Reasons Students’ BMI Could Not Be Assessed

To complete the BMI assessments, schools collected each student’s height and weight measurements. Twenty-four percent of students (53,260 out of 218,391) were classified as “unable to assess” because no data was submitted, a reason was given to not assess the student (see Table 1), or the student did not have valid data for height, weight, or both. Table 1 provides a breakdown of reasons for the classification of “unable to assess.” About one-tenth of a percent (191 students; see Figure 2) of data submitted was invalid for analysis due to incomplete or incorrect data provided, measurement protocols not being followed, or inaccuracies in the equipment used to complete the assessment.

FIGURE 2. YEAR 18 STUDENT BMI ASSESSMENT

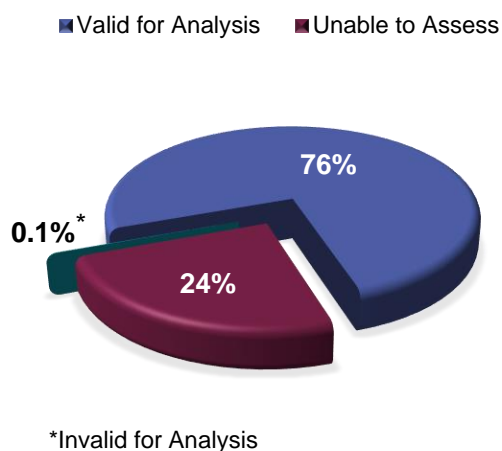

TABLE 1. REASONS UNABLE TO ASSESS BMI

Breakdown of Known ‘Unable to Assess’ Reasons		
Absent	13,974	49%
Parent Refused	9,048	32%
Student Refused	2,960	10%
Other	2,207	8%
Physical Disability	248	1%
Weight Exceeded Scale	29	0%
Inaccurate Measurements	25	0%
Pregnant	20	0%

Statewide Results of the Arkansas BMI Assessment

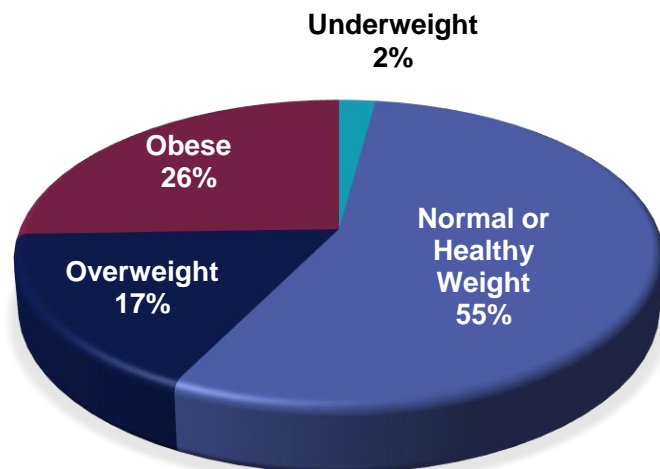

Total public school enrollment in grades K, 2, 4, 6, 8, and 10 for the 2021-2022 school year, reported by the Arkansas Department of Education, was 218,391 students in 1,037 schools, within 259 school districts. The results presented in this section are based on data from 193,833 individual students (enrolled in grades K, 2, 4, 6, 8, or 10) with valid BMI assessments reported prior to June 30, 2022, by 1,023 schools in 259 school districts. BMI classifications are reported by gender, grade, and race and ethnicity. This section includes statewide percentages of underweight, healthy weight, overweight, and obese students for selected demographic subgroups. Percentages for these four classifications are also reported for the majority of school districts and counties in the state (see Appendices B and C).

BMI CLASSIFICATIONS FOR ALL STUDENTS

Figure 3 illustrates the BMI classification distribution of Arkansas students during the 2021-2022 school year. In Year 19 (2021-2022), 43.0% of Arkansas students had BMI measurements that were classified as overweight or obese.

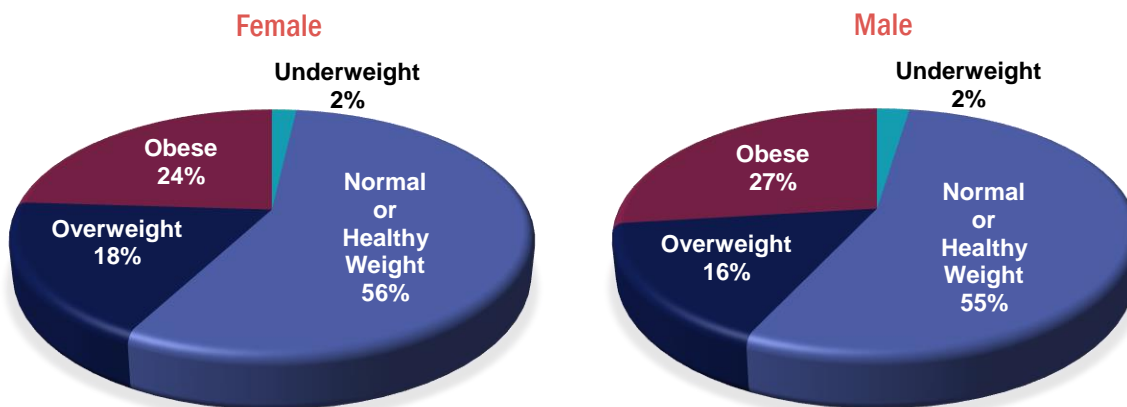

FIGURE 3. YEAR 19 STUDENT BMI CLASSIFICATION FOR ARKANSAS PUBLIC SCHOOL STUDENTS

BMI CLASSIFICATIONS BY GENDER

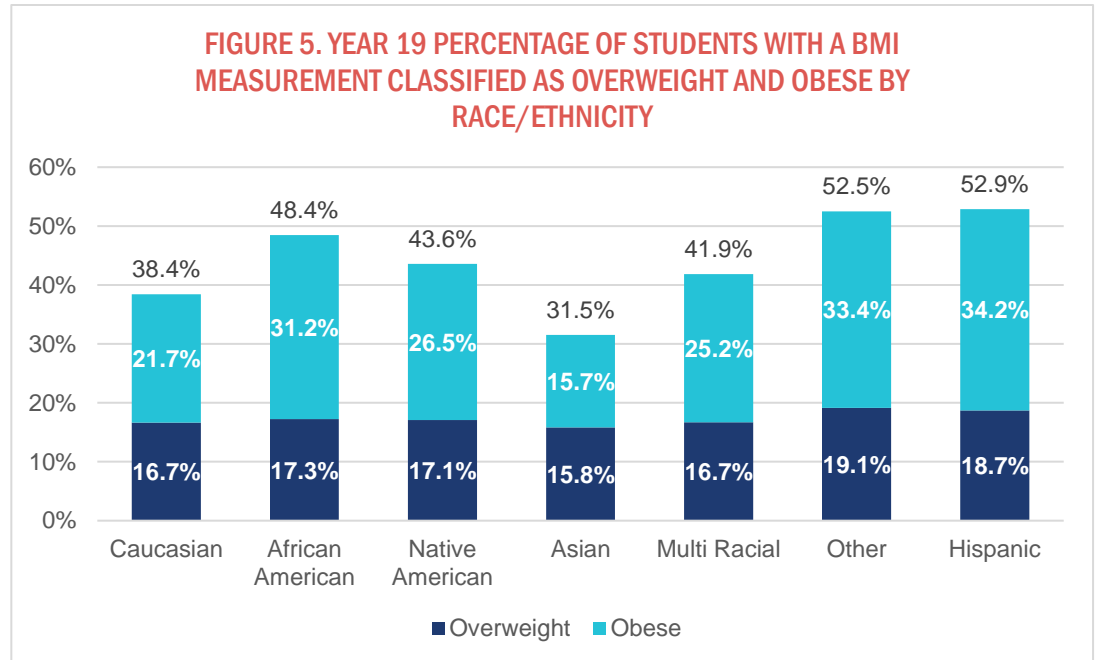

Figure 4 provides BMI classifications by gender for the 2021-2022 school year. More boys (26.9%) than girls (24.0%) were classified as obese. A higher percentage of girls (18.1%) had BMI measurements classified as overweight compared to boys (16.1%). The percentage of BMI measurements classified as healthy weight for girls (56.0%) was higher than for boys (54.6%).

FIGURE 4. YEAR 19 STUDENT BMI CLASSIFICATION BY GENDER

BMI CLASSIFICATIONS BY RACE/ETHNICITY

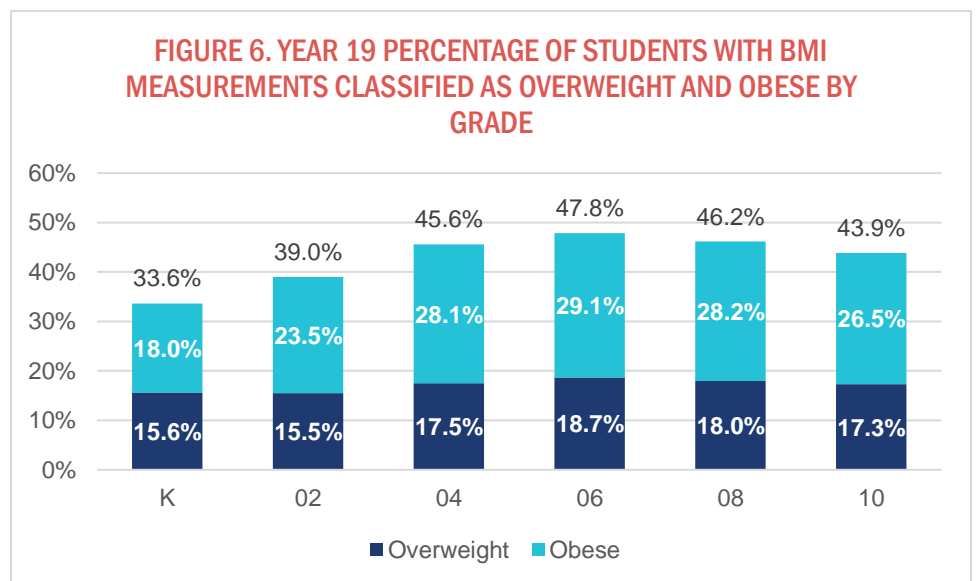

Figure 5 shows the percentages of students with a BMI measurement classified as overweight or obese, grouped by race and ethnicity. As in prior years, Hispanic students had the highest percentage of BMI measurements classified as either overweight or obese at 52.9% combined. Among students grouped

by Other race/ethnicity, 52.5% of BMI measurements were classified as either overweight or obese, followed by 48.4% of African American students, 43.6% of Native American students, 41.9% of Multiracial students, 38.4% of Caucasian students, and 31.5% of Asian students.

BMI CLASSIFICATIONS BY GRADE

Figure 6 illustrates the percentage of students whose BMI measurement was classified as overweight or obese by grade level. Findings indicate that 33.6% of kindergarten students entered the school system either overweight or obese. The percentage of students' BMI measurements classified as overweight or obese increased with increasing grade level until grade 6, where it slowly declined to 43.9% in grade 10.

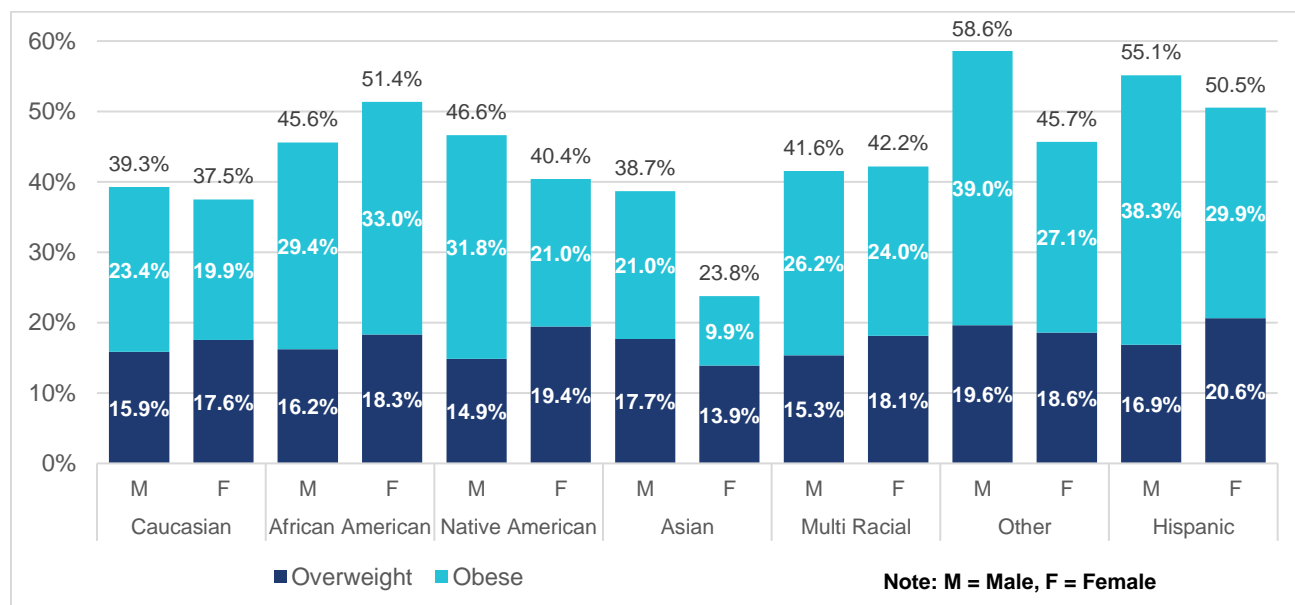

BMI CLASSIFICATIONS BY RACE/ETHNICITY AND GENDER

When evaluating results by race/ethnicity and gender, boys with a designation of Other race/ethnicity had the highest combined percentage of BMI measurements classified as overweight or obese (58.6%) (see Figure 7). In most other race/ethnicity groups, boys had a higher total percentage of overweight or obese BMI classifications when compared with girls, with the exception of African Americans. Total percentages of multiracial boys and girls with BMI measurements in the overweight or obese category were nearly identical. Among female students, the highest percentage of students with measurements classified as overweight or obese was found in African Americans at 51.4%, followed by Hispanics at 50.5%.

The greatest difference between male students and female students within a race/ethnicity group was among Asian students, where 23.8% of girls were in the two highest BMI classifications compared with 38.7% of boys.

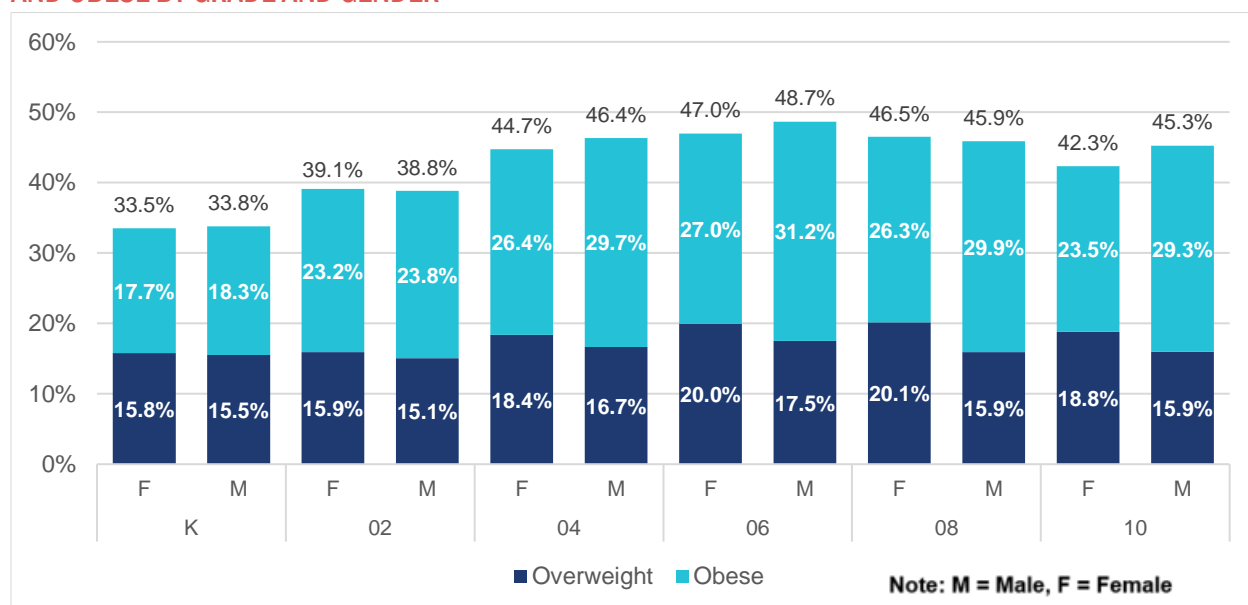

FIGURE 7. YEAR 19 PERCENTAGE OF STUDENT BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY RACE/ETHNICITY AND GENDER

BMI CLASSIFICATIONS BY GRADE AND GENDER

As illustrated in Figure 8, data show that a slightly higher percentage of boys (33.8%) than girls (33.5%) enter school with BMI measurements classified as either overweight or obese in kindergarten. In the second grade, a smaller percentage of male students (38.8%) than female students (39.1%) were classified in the overweight or obese category. In the fourth grade, the difference between boys and girls was more pronounced than most other grades, with 46.4% of male students and 44.7% of female students in the two highest BMI categories. In the sixth grade, male students' BMI measurements were slightly higher than female students (48.7% and 47.0%, respectively) for the total overweight and obese categories. In the eighth grade, the difference between boys and girls was only slightly higher for female students at 46.5% and 45.9% for boys. In the tenth grade, the difference between boys and girls is the highest in the combined overweight and obese BMI categories among all grade levels (45.3% and 42.3% respectively).

FIGURE 8. YEAR 19 PERCENTAGE OF STUDENTS WITH BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY GRADE AND GENDER

BMI CLASSIFICATIONS BY GENDER, GRADE, AND RACE/ETHNICITY GROUP

Analysis of the BMI data shows that some groups of students face a heightened risk for childhood obesity. The percentages of African American students and Hispanic students with BMI measurements in the overweight or obese categories was higher across all measured grades compared to their Caucasian peers. The highest percentage of BMI measurements classified as overweight or obese was found among male students with a race or ethnicity designator of Other, especially in the fourth grade, where 68.3% were classified as either overweight or obese (see Figure 9 and Table 2).

FIGURE 9. YEAR 19 PERCENTAGE OF STUDENTS WITH BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY GENDER, RACE/ETHNICITY, AND GRADE

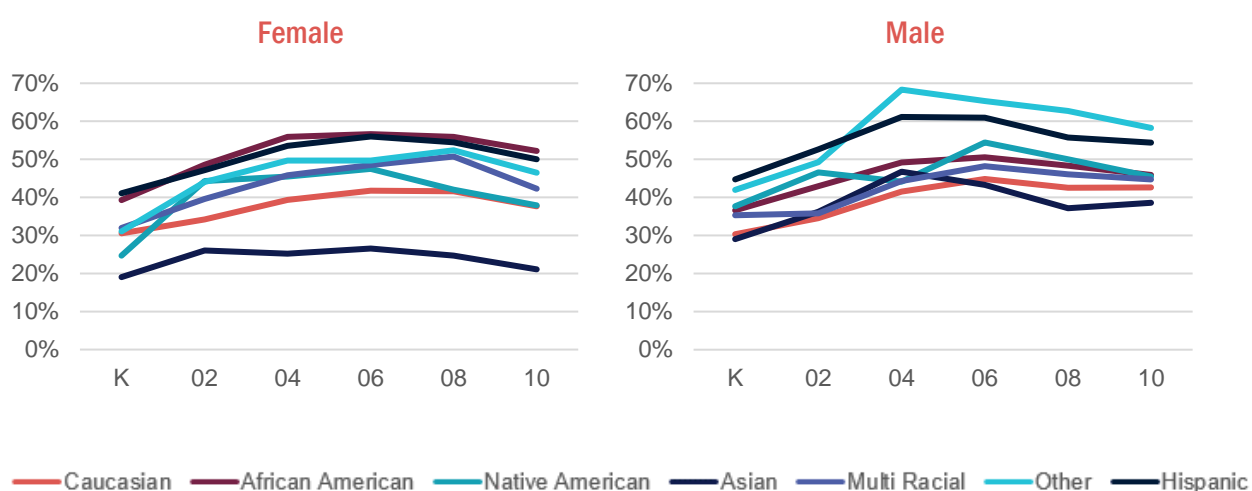

TABLE 2. YEAR 19 PERCENTAGE OF STUDENTS WITH BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY GENDER, RACE/ETHNICITY AND GRADE

	Female							Male						
	Caucasian	African American	Native American	Asian	Multi-Racial	Other	Hispanic	Caucasian	African American	Native American	Asian	Multi-Racial	Other	Hispanic
K	30.6%	39.3%	24.7%	19.0%	32.0%	31.1%	41.1%	30.3%	36.6%	37.7%	29.0%	35.3%	42.0%	44.7%
2	34.2%	48.6%	44.3%	26.1%	39.6%	44.1%	47.2%	34.6%	43.0%	46.6%	36.3%	35.8%	49.3%	52.6%
4	39.3%	55.9%	45.5%	25.2%	45.8%	49.7%	53.5%	41.5%	49.2%	44.2%	46.8%	44.3%	68.3%	61.1%
6	41.8%	56.6%	47.5%	26.6%	48.5%	49.7%	56.0%	44.9%	50.6%	54.4%	43.3%	48.2%	65.3%	60.9%
8	41.6%	55.9%	42.0%	24.7%	50.7%	52.4%	54.4%	42.5%	48.3%	50.0%	37.2%	46.1%	62.7%	55.8%
10	37.7%	52.2%	37.9%	21.1%	42.3%	46.5%	50.0%	42.6%	45.9%	45.5%	38.6%	44.8%	58.3%	54.4%

TRENDS IN STUDENT BMI

Data from the past five years of BMI screenings (see Figure 10) reveal that the distribution of students in each of the four categories (underweight, healthy weight, overweight, and obese) remained steady until the 2020-2021 school year, when the proportion of students with BMI measurements in the overweight or obese categories increased significantly. In the most recent measurement year, the proportion of measurements in these levels decreased slightly, with the proportion of BMI measurements in the obese category remaining above pre-pandemic levels.

FIGURE 10. TRENDS IN BMI CLASSIFICATIONS FOR ARKANSAS PUBLIC SCHOOL STUDENTS

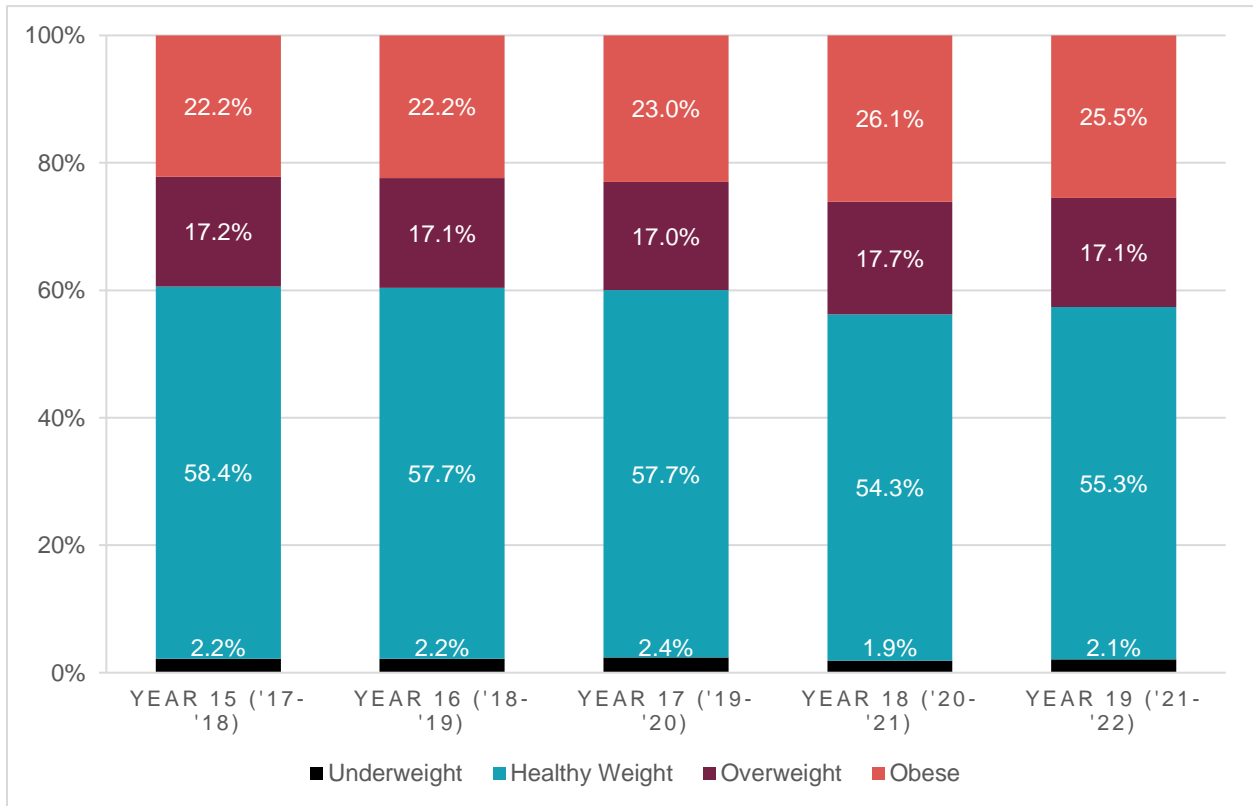

Figure 11 illustrates the trends of students with BMI measurements classified as overweight and obese at Kindergarten and at grade 10 over the 19 years data has been collected. There has been modest improvement in the percentages of students classified as overweight and obese entering kindergarten from Year 1 (32.6%) to Year 17 (31.2%) until Year 18 where the percentage increased sharply to an 18-year high of 36.1%. Year 19 saw a decrease to 33.6% from that high mark of 36.1%. Similarly, the percentage of students classified as either overweight or obese in grade 10 saw an 18-year high of 44.8% in Year 18, up six percentage points from the initial grade 10 assessment of 38.6% in Year 1, but has reduced slightly to 43.9% in Year 19.

FIGURE 11. PERCENTAGE OF STUDENTS WITH BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY GRADE, YEAR 1 THROUGH YEAR 19

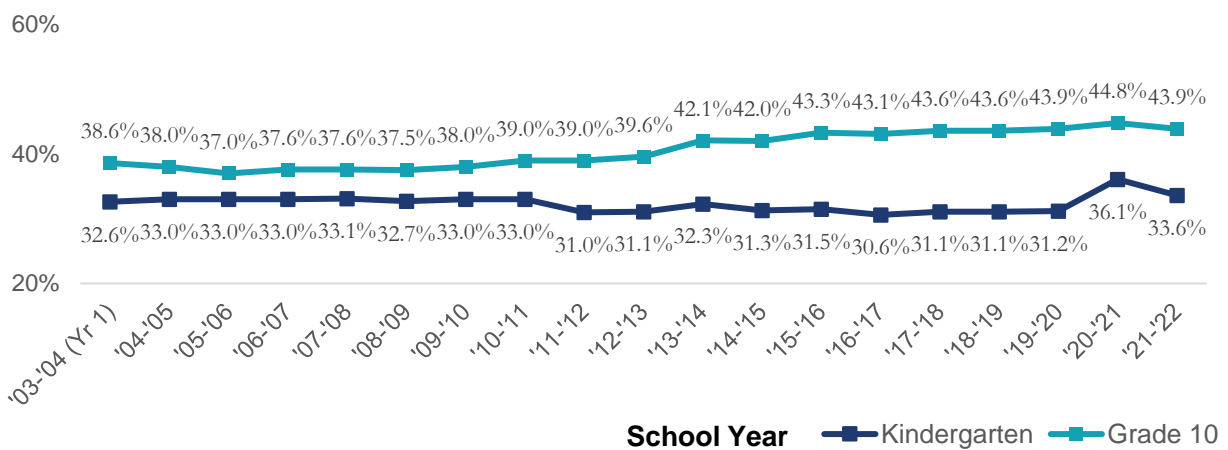

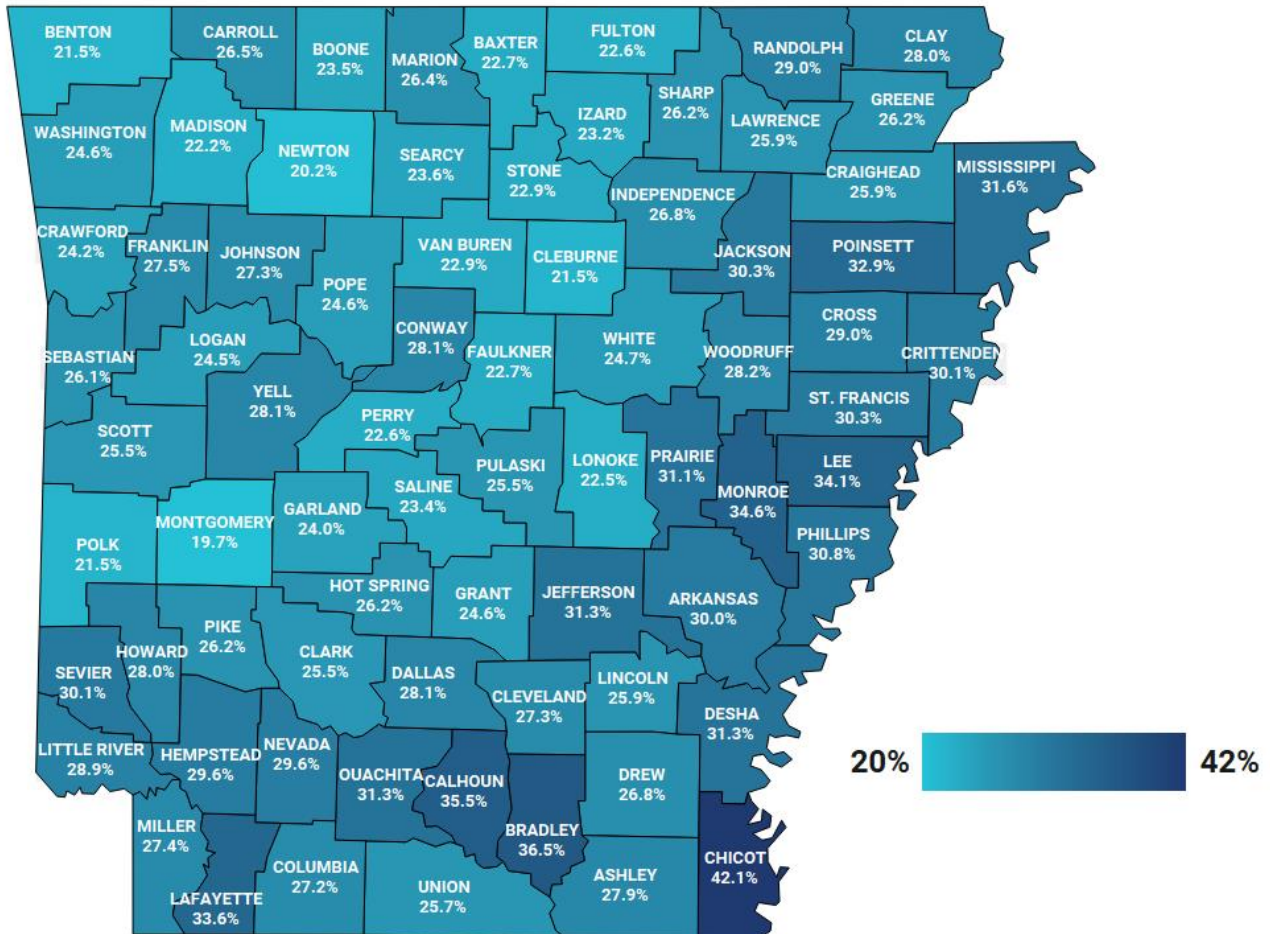

Figure 12 on the following page displays the percentage of students with a BMI classification of obese, from among schools located in each county. Calculations are based on valid measurements among students in even grades Kindergarten through 10th grade. Montgomery County had the lowest percentage of valid measurements classified as obese, at 19.7%, while Chicot County had the highest percentage at 42.1%. While all county level data meets minimum thresholds for inclusion based on individual counts of students, some rural counties experienced relatively low numbers of eligible students having valid measurements in the most recent year.

FIGURE 12. PERCENTAGE OF STUDENTS CLASSIFIED AS OBESE, BY COUNTY LOCATION OF SCHOOL, FOR THE 2021-2022 SCHOL YEAR

Conclusion

A total of 43.0% of Arkansas public school students who had a BMI measurement in the 2021-2022 school year are classified as either overweight or obese, down from 44.0% in the 2020-2021 school year. BMI measurements in 2020-2021 indicated the highest percentages of grade-level obese classifications since student BMI measurement began in Arkansas. The proportion of students with a BMI measurement in the obese category remains higher than pre-pandemic levels for 2021-2022 school year measurements, which underscores the need for continued efforts to address child health and wellness.

Implications for State Policy

Statewide, collaborative efforts are needed to achieve the goal of increasing the percentage of adults, adolescents, and children who are at a healthy weight. Continued state and local efforts are needed to address focus areas and state health improvement planning being led by the Arkansas Department of Health, including: physical and built environment; nutritional

standards in government, institutions, and the private sector; nutritional standards in schools; physical education and activity in schools; healthy worksites; access to healthy foods; sugar-sweetened beverage reduction; and breastfeeding.

Appendix A: BMI Classification by School

Note: In order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools and districts with fewer than five students classified as overweight or obese, these two groups are combined. Schools with valid measurements for less than 80% of enrolled students are not reported in this school-level appendix.

District LEA	District Name	School LEA	School Name	Under-weight (%)	Healthy Weight (%)	Over-weight (%)	Obese (%)	Over-weight and Obese (%)
6040700	ACADEMICS PLUS PUBLIC CHARTER SCHOOLS	6040702	MAUMELLE CHARTER ELEMENTARY	4.27%	69.19%	18.48%	8.06%	26.54%

Appendix B: BMI Classification by School District

Note: In order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools and districts with fewer than five students classified as overweight or obese, these two groups are combined.

School District	District LEA	Underweight (%)	Healthy Weight (%)	Overweight (%)	Obese (%)	Overweight and Obese (%)

Appendix C: BMI Classification by County

Note: In order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools and districts with fewer than five students classified as overweight or obese, these two groups are combined.

County	Underweight (%)	Healthy Weight (%)	Overweight (%)	Obese (%)	Overweight and Obese (%)
